

CEMAC losses of customs duties with the EU28-UK EPA

Jacques Berthelot (jacques.berthelot4@wanadoo.fr), February 13, 2017

Outlook

- I – The UK share of EU-CEMAC trade in 2015
- II – Summary of the losses of import duties on the EU28-UK FOB exports to CEMAC
- III – The EU28-UK exports to CEMAC and import duties on agricultural and fish products
- IV – The gap between the EU28-UK FOB exports and CEMAC CIF imports
- V – Taking into account the large rise in CEMAC population
- VI – Taking into account trade diversion from 2016 onwards
- VII – The loss of customs revenues due to the VAT on imports
- VIII – The loss of customs revenues due to imports from the RoW and intra-CEMAC
- IX – The impact of imports from the RoW and intra-CEMAC not affected by trade diversion
- Conclusion
- Annexes 1 to 5 – The EU28 subsidies to its exports to CEMAC of cereals, meats and dairy
- Annexes 6 to 8 – Summaries and details of the EU28-UK FOB exports to CEMAC and Cameroon in 2015 and of customs duties according to their rates and categories.

On 17 December 2007, Cameroon and the EU initialled an Economic Partnership Agreement (EPA)¹, which was signed on 15 January 2009 under the name "*Interim Agreement with a view to an Economic Partnership Agreement between the European Community and its Member States, of the one part, and the Central Africa Party, of the other part*", it being specified that "*Central Africa, which for the purposes of this Agreement consists of the Republic of Cameroon*", while formally the CEMAC (Economic and Monetary Community of Central Africa) comprises 6 countries for the EPA: Cameroon, Republic of the Congo (Brazzaville), Gabon, Equatorial Guinea, Central African Republic, Chad². The European Parliament gave its agreement on 13 June 2013 and the Parliament of Cameroon ratified it on 22 July 2014 and its provisional application started on 4 August 2014. The first EU-Cameroon Joint Committee was held in May 2015. On the same day, the European Commission finally closed the door to the regional EPA in a letter from the European Commissioners for Trade, Cecilia Malmström, and International Cooperation and Development, Neven Mimica, addressed to CEMAC president Pierre Moussa: "*As indicated in our letter of July 19th, our services are at your disposal to study with you the modalities of membership of the current agreement between the EU and Cameroon. That it is therefore not*

² Incidentally, DG Trade still declares on its website that the CEMAC EPA groups 8 countries including the Democratic Republic of the Congo (Kinshasa) and Sao Tome and Principe (<http://ec.europa.eu/trade/policy/countries-and-regions/regional-policies/central-africa/>) whereas it states elsewhere that the Democratic Republic of the Congo is a member of SADC but has not been willing to join the SADC EPA where it is an observer. According to a report from the Friedrich Ebert Stiftung Foundation in November 2015, it could also join the CEMAC EPA, as well as Sao Tome and Principe (<http://library.fes.de/pdf-files/bueros/kamerun/12137.pdf>).

*possible to re-launch the regional negotiations interrupted in 2011 and in particular to discuss the text of a new agreement*³. Beginning in 2003, negotiations for an EU-CEMAC regional EPA have therefore failed. Since 2011 the two sides had not met and the implementation of the interim EPA of Cameroon was perceived by the CEMAC as a threat to subregional integration. However, following the collapse of oil prices and the drying up of the budgetary resources of the producing countries (Congo, Gabon and Chad), it seems that the other five States are about to sign the CEMAC regional EPA very quickly⁴.

This paper assesses the CEMAC customs duty losses (DD) on its imports from the EU-28 minus the United Kingdom (UK) after the Brexit on the basis of EU28-UK exports in 2015 and of the liberalization programming provided for by the EPA. A subsequent document will assess the GSP and GSP+ and MFN customs duties that some CEMAC States would have to pay to the EU28 on their exports without an EPA.

I - The United Kingdom's share in the CEMAC-EU28 trade in 2015

Table 1 shows that the EU28 recorded a deficit of €1.887 billion (bn) in its total trade with the CEMAC in 2015, of which €1.647 billion for the EU28-UK, the UK accounting for 12.7% of the deficit. The EU28 deficit hides a surplus of €291 million (M) on agricultural products and €43.3 M on fish and preparations and a deficit of €2.225 bn on other products (mainly raw materials, of which petroleum products).

The UK accounts for 4% of the EU28 agricultural surplus (8.8% for dairy products and 6.3% for poultrymeat and preparations) and for 11.2% in the deficit of non-agricultural and fish products.

II – Summary of CEMAC losses of import duties on the EU28-UK FOB exports in 2015

Eurostat is the source of the EU28-UK exports data in 2015 in FOB values⁵.

Article 21 of the EPA established 4 categories of products according to the liberalization schedule, T1 being the year of entry into force (in 2016):

- Category 1: liberalized products from the entry into force of the EPA in 2016 (T) to 2019 (T4)
 - Category 2: liberalized products from 2017 (T2) to 2023 (T8)
 - Category 3: liberalized products from 2020 (T5) to 2029 (T14)
 - Category 5: products totally excluded from liberalization. There is no category 4.
- Eurostat est la source des données sur les exportations de l'UE28-RU de 2015 en valeurs FAB.

Table 2 – Schedule for CEMAC dismantling of import duties according categories 1, 2, 3

Categorie	2014	2015	2016	2017	2018	2019	2020	2021
1	0 %	0 %	25 %	50 %	75 %	100 %		
2	0 %	0 %	0 %	15 %	30 %	45 %	60 %	75 %
3	0 %	0 %	0 %	0 %	0 %	0 %	10 %	20 %
	2022	2023	2024	2025	2026	2027	2028	2029
2	90 %	100 %						
3	30 %	40 %	50 %	60 %	70 %	80 %	90 %	100 %

Unlike the 5-year moratorium before the liberalization of the West African (WA) and Eastern Africa (EA) EPAs, the moratorium is only 2 years for the CEMAC-EU EPA and, as it has been provisionally applied in Cameroon since 4 August 2014, liberalization began on 4 August 2016.

The rates of import duties (IDs) per tariff line (TL) are often the same from one category to another: if category 5 relies mainly on a 30% ID, it is also using rates of 20%, 10% and even 5%. Categories 2 and 3 have also rates of 30%, 20% and 10%. As for category 1 it uses rates of 20%, 10%, 5% and 0%.

Annex 8 shows the evolution of EU28-RU FOB exports to CEMAC and IDs losses on these EU FOB values (they will then be estimated in CEMAC CIF values) according to the categories and rates, while Annexes 6 and 7 present the summaries of the IDs in EU28-UK FOB value from 2015 to 2020 and from 2021 to 2029.

Tables 3 and 4 present the summaries of these summaries. It can be seen that €3.877 bn or 78% of the €4.971 bn of the EU28-UK FOB exports to CEMAC in 2015⁶ covered the liberalized products which contributed to 62.8% of the IDs, i.e. €496 M out of a total of €789 M. The percentage of IDs collected on liberalized products will fall to 48.3% in 2020, 29.8% in 2024, 7.8% in 2028 and zero in 2029, with only then €293 M of IDs on products excluded from liberalization. The average rate of IDs on all imported products from the EU was 15.87% in 2015, of which 26.8% on excluded products and 12.8% on liberalized products. The average rate will gradually fall to 11.4% in 2020, 8.4% in 2024 and 5.9% in 2029, where

⁵ FOB (free on board): price of a product ready to be exported (port, airport, railway or trucks station); CIF (cost, insurance, freight): price of a product once arrived in the country of importation, before import duties; MFN (Most Favoured Nation): the highest IDs for countries without preferential tariffs, mostly Western countries.

⁶ It should be noted that the €5.327 bn of total EU28-RU exports to the CEMAC shown in Table 1 are €355 M higher than the €4,972 bn in exports calculated on a tariff-line basis, to which reference will be made and the difference is explained not only by the €80.4 M of the total confidential trade at the end of each chapter of the HS (Harmonized System of Trade). Undoubtedly all confidential trade is not there (for example, that of arms).

only the excluded products will be taxed, while the ID rate on liberalized products will fall to 7.1% in 2020, 3.2% in 2024 and 0.6% in 2028 and then 0 in 2029.

Table 3 – Summary of IDs losses per category and rate from 2015 to 2020, in € 1000

ID rate 1235	10,53%	9,65%	8,90%	8,40%	7,90%	7,40%	6,90%	6,40%	5,90%

What is specific to CEMAC (including Cameroon) compared to the EPAs of West and East Africa is that ID rates of 5%, 10%, 20% and 30% are found in the 4 categories 1, 2, 3 and 5, and Table 5 shows the amounts of imports and ID in EU28-RU FOB values in 2015.

Table 5 - Distribution of EU28-UK exports to CEMAC and Cameroon in 2015 by ID rate

ID rate	CEMAC				Cameroon			
	Exports	%	ID	%	Exports	%	ID	%
30%	1369340952	27,54%	410802287	52,07%	358416160	25,04%	107434850	49,55%
20%	517731002	10,41%	103004644	13,06%	135441036	9,46%	27088207	12,49%
10%	2502549464	50,33%	250254946	31,72%	717605852	50,13%	71760588	33,10%
5%	498644097	10,03%	24932208	3,16%	209892874	14,66%	10522021	4,85%
0%	83572821	1,68%	0	0	10147351	0,71%	0	0
Total	4971838336	100%	788994085	100%	1431503273	100%	216805666	100%

There is no significant difference in this distribution between CEMAC and Cameroon. It can be seen that EU exports taxed at 30% accounted for just over one-quarter of total exports, but half of total IDs, while Table 6 shows that almost one-third (32.73%) of exports at a 30% ID rate are not in category 5. Exports taxed at 10% accounted for half of exports for just over 30% of IDs, of which 3% are in category 5. Exports at 20% ID accounted for about 10% of all exports for about 13% of IDs. And those taxed at 5% represented about 10% of exports to CEMAC for just over 3% of IDs (1.3% in category 5) whereas they accounted for almost 15% of the total in Cameroon for nearly 5% of IDs. Finally, those duty free accounted for 1.7% of total CEMAC exports, and 0.7% for Cameroon. It can also be deduced that Cameroon accounted for 28.8% of total EU28-RU exports to CEMAC in 2015 and 27.5% of IDs, with the same relative weight of exports with IDs of 30% and 20 % (26.2%), 10% (28.7%) and 5% (42.2%).

It should be noted that imports of category 5 products excluded from liberalization are not prohibited, but their IDs will not be reduced with the EPA. As 12.7% of category 5 imports have IDs at 10% or 5% they will surely continue to be imported, as their IDs represent only 1.3% of the total. It is assumed that they will participate in the trade diversion and we will label 51 this sub-category of 5. Similarly, the subcategory of 5 taxed at 20% will be named 52, which represents 5.9% of total EU exports and 2.2% of CEMAC IDs. On the other hand,

we will call 53 the subcategory taxed at 30% which will be capped at its 2015 level, despite population rise.

Table 6 – EU28-UK exports to CEMAC and Cameroon and IDs in 2015 by category and rate

But the IDs calculated here are only those collected on EU-UK FOB exports in 2015 and the following 4 components should be added:

- The difference between the EU FOB values and the CEMAC CIF values
- The large increase in the CEMAC population
- The trade diversion from 2016 onwards
- The rise on the value added tax (VAT) revenue on imports

But before let us look at the special case of exports and agricultural and fish.

III - Exports and import duties on agricultural and fish products

Tables 7 and 8 specify exports and IDs of agricultural and fish products from Chapters 01 to 24 of the Harmonized System. Exports of agricultural and fish products outside Chapters 01 to 24 were negligible: €1.9 M, or 0.2% of the €1.029 bn of total agricultural and fish exports. 25% of agricultural and fish exports would be liberalized (on the basis of 2015), accounting for 14.1% of the EU-UK trade in fish and seafood exports, a percentage that will continue to decline steadily with the liberalization.

Table 7 – Exports and IDs of agricultural and fish products from 2015 to 2020, in €1000

Category	Exports	IDs (2015)	ID rates	2016	2017	2018	2019	2020

Table 9 compares total exports and IDs of agricultural products. They accounted for 17.6% of total EU28-UK exports to CEMAC in 2015, of which 60% of exports of excluded products and 5.6% of exports of liberalized products. But the IDs on agricultural exports accounted for 24.6% of the total IDs, of which 56.8% of IDs on excluded products and 5.5% of IDs on liberalized products. This explains why the average agricultural ID of 22.1% was higher than that of 15.9% for all products, of which 25.3% on excluded products, less than 26.8% for excluded products, and of 12.5% on liberalized agricultural products, just below 12.8% on all liberalized products.

Tableau 9 – Share of agricultural & fish products in the EU28-UK exports and ID to CEMAC in 2015

€ 1000	All products		Agricultural products		% of agricultural exports

Table 10 compares the evolution of Cameroon's share of EU28-UK exports to CEMAC from 2004 to 2015, in particular on poultry meat and preparations, as it was in 2004 that the scandal of imports of frozen and thawed chickens broke out, notably with the mobilization of the NGO ACDIC chaired by Bernard Njonga⁷. This led the government to impose a tax of 1000 FCFA per kg of imported chicken in addition to the 20% ID and the 19.25% VAT, of which it was previously exempted. This has reduced Cameroon's share of the EU28-UK chicken and preparations exports to CEMAC from 37.2% in value and 35.4% in volume in 2004 to 3.4% and 0.4% in 2015, respectively.

In fact, the sharp rise in the EU28-UK exports of these basic foodstuffs to the CEMAC, with the exception of poultry meat and preparations to Cameroon, is linked to the inadequate protection of the CEMAC market including exemptions or reduced VAT rates on these basic foodstuffs. The latest inconsistency is Cameroon's decision to suspend VAT on rice imports in 2017, although in 2016 it reinstated a 5% ID on imports of rice that had been abolished since 2008⁸. Yet Cameroon's tariff offer for the EPA has a 20% ID on rice, but it is true that the EU

⁸ <http://www.camer.be/56185/12:1/cameroun-vers-la-suppression-de-la-tva-sur-le-riz-a-partir-de-2017-cameroun.html>

does not export rice. You can read a comparative analysis of import protection on rice and the need to increase it in ECOWAS⁹, which also applies to CEMAC.

Source: Eurostat; Poultry: and preparations; BM: bovine meat and preparations; PM: pig meat and preparations; cereals: and preparations.

The insufficient protection of agricultural products is evident in view of the massive dumping due to the EU's large domestic subsidies to its exports, particularly for cereals, dairy products and meat. However, the EU has always refused to deal with domestic subsidies in its texts on EPAs (and in its other free trade agreements) on the ground that it is an issue to be negotiated exclusively at the WTO where the EU refuses to question the dumping effect of its domestic subsidies on the pretext that they are essentially "decoupled" and notified in the green box, contrary to four WTO Appellate Body rulings.

These EU28 export subsidies to CEMAC reached €126.2 M in 2015, of which €71.2 M on cereals and preparations, €25.3 M on pigmeat and preparations, €14.1 M on poultry meat and preparations and eggs, €10.2 M on dairy products and €5.5 M on bovine meat and preparations. Details of the calculations are given in Annexes 1 to 5. Naturally, since all

⁹ J. Berthelot, *Pour une meilleure protection du riz de la CEDEAO : comparaison des droits de douane sur le riz entre pays déficitaires ou excédentaires*, 14 juin 2014, https://www.sol-asso.fr/wp-content/uploads/2014/07/Pour_une_meilleure_protection_riz_CEDEAO.pdf

agricultural products in the EU now benefit from decoupled direct aids, not only those mentioned above, their exports are a source of dumping. It should be noted that the bulk of subsidies to animal products (meat, eggs and dairy products) are allocated to feed of European origin consumed by these animals, to which must be added direct decoupled aids to producers of bovine meat and dairy products, but export refunds have completely disappeared in 2015. The methodology for calculating the subsidies is set out in the document "*The EU dumping of cereals, dairy and meats in 2012, total and to ACP countries*" of March 5, 2014, but feed subsidies have been revised downwards, taking into account the consumption index (kg of livestock feed per kg of meat, estimated at 2 for poultry meat – it is lower for chicken but higher for turkey – and 3 for pig meat) and the calculation of the subsidy per tonne of cereals was revised in the document "*Reappraisal of the UE dumping on cereals to West Africa from 2006 to 2014*" of May 11, 2015, downloadable on SOL website¹⁰. Additional aid under the second pillar of the Common Agricultural Policy (CAP) and the national or Community exceptional aid granted in 2015 and 2016 for the products in crisis because of price slumps is not taken into account so that dumping is underestimated.

IV - The gap between the EU FOB values and the CEMAC CIF values

An average deviation of 20% between the FOB values (free on board) and the CIF (cost-insurance-freight) CEMAC values will be assumed¹¹. It is clear that this gap varies greatly between products (transported by sea or air) and the EU exporting countries. However, the CIF values available in SH6 (6-digit Harmonized System) cannot be based on ITC TradeMap data due to a massive underestimation since the CEMAC CIF value is almost always below the EU28 FOB value UE28 whereas this should be the reverse. This is probably due, among other causes, to legal exemptions and/or under-invoicing by the CEMAC customs services. The Harmonized System (HS) codes for the products indicated in Table 11 are: concentrated milk (0402), wheat (1001), beverages (22), preparations of cereals (19), miscellaneous food preparations (21), equipment (84), automobiles (87), pharmaceutical products (30), electrical equipment (85), used clothing (63), plastics (39), cements (2523), petroleum products (27), chemical products (38). This 20% adjustment implies that the CEMAC IDs would be correctly applied, in line with the EPA tariff offer.

Table 11 - Large underestimation of CEMAC CIF values on FOB EU28 values in 2015

€ million	All	0402	1001	22	19	21	84	87	30	85	63	39	2523	27	38

Source: ITC TradeMap; X: exports; M: imports

The trade database of UNCTAD cannot either be relied on, since it overestimates CEMAC's CIF imports in relation to EU FOB exports. For example, in SITC codes, CEMAC's total CIF imports from the EU28 were 60% higher in 2015 than the EU28 FOB exports, 105.4% higher for tires (code 625), 95,5% for petroleum products (code 334), 50.2% for motor vehicles (code 781), 348.6% for aircraft (code 792), 35.7% for alcoholic beverages (code 112) and, in HS codes, 44% higher for cheese and 40% for butter, even if it is only 3.9% higher for wheat. On the other hand, CIF imports of second-hand clothing (code 269 SITC) are 21.5% lower than the EU28's FOB exports. ITC TradeMap recognizes these contradictions, which it explains for many reasons¹².

¹⁰ <https://www.sol-asso.fr/articles-de-2015/>

¹¹ Note sur l'écart entre les prix FAB UE28-RU et CAF AO, CEMAC et EAC en 2015, SOL, 7 janvier 2017.

¹² http://www.trademap.org/stFAQ.aspx#li_Answer1_7

We see that these data of ITC TradeMap and UNCTAD, both drawn from the UN Comtrade database, are contradictory and does not allow us to conclude on the discrepancy between the EU FOB values and the CEMAC CIF values.

Furthermore, the difference between FOB and CIF values must take account of the fact that Chad and the Central African Republic are landlocked and bear very high land transport costs, knowing that the EU28-UK exports to these two countries represented 17.5% of its exports to CEMAC. In West Africa, land transport costs up to the ports of the three landlocked countries – Mali, Burkina Faso and Niger – are larger than sea transport costs from FOB WA to CIF EU.

As a result, the €3.877 bn EU28-UK FOB exports of products liberalized in 2015 corresponded to €4.653 bn of CEMAC CIF imports and the IDs on these imports amounted to €595 million. However, before calculating the CIF values from 2016, it is necessary to estimate the increase in imports linked to the population increase.

V - The large increase in the CEMAC population

According to the United Nations Population Database, revised in 2015, the CEMAC population would increase from 49.473 M inhabitants in 2015 to 70.093 M in 2029 (+ 41.7%) and would be multiplied by 2.2 (+ 118.1%) to 107.915 M in 2050. In our previous analyses of Cameroon and WA EPAs, we used a growth rate (GR) of imports from the EU28-UK equal to 2/3 of the population GR. However we have just seen that the annual GR of imports from the EU28-UK from 2000 to 2015 increased by 75.4% more than the population GR: 4.84% against 2.76%. That is why we will align the GR of imports and corresponding IDs on the population GR, which will gradually decrease by 2.48% from 2015 to 2016, by 2.19% from 2028 to 2029 and by 2.08% from 2029 to 2050. So that CIF imports of liberalized products would increase from €4.653 bn in 2015 to €5.499 bn in 2022, €6.429 bn in 2029 and €9.905 bn in 2050. But, since the IDs rate on liberalized products would fall, the IDs on liberalized products would fall from €595 M in 2015 to €229 M in 2022, €30.5 M in 2028 and would be zero in 2029.

VI - Trade diversion from 2016 onwards

The trade diversion will favor imports from the EU to the detriment of those from intra-CEMAC and the rest of the world (RoW) which would continue to be taxed (but intra-CEMAC trade is not taxed, at least in principle, and is only subject to VAT).

According to ITC TradeMap, CEMAC total imports have been €15.264 bn in 2015, of which €5.571 bn from the EU28 (of which €368 M from the UK, implying €5.203 bn from the EU28-UK), €345 from intra-CEMAC and €9.348 bn from the RoW. Or, in percentage of the total: 34.09% from the EU28-UK, 2.26% from CEMAC and 61.12% from the RoW. Although these CEMAC CIF imports according to ITC Trade Map should have been much higher than the EU28-UK FOB exports, the percentage distribution of CEMAC imports from its different sources can be considered credible.

After consulting several studies, it will be prudent to limit the rate of trade diversion to 20% instead of the 32.5% indicated in the study by Lionel Fontagné of CEPII¹³ which had already been reduced to 25% by prudence in our analyses of 2016. Indeed, having questioned him about the big difference between his estimate of 32.5%, which he confirmed, and that of the

¹³ http://lionel.fontagne.free.fr/paper/fontalabmita_JAE.pdf

DG Trade's impact assessment of 4.1%, Lionel Fontagné replied that this is due, in particular, to the difference between the econometric models used – of partially equilibrium for him and of general equilibrium for DG Trade – and the periods concerned: his model of 2008 was based on trade data of 2002-04 whereas the DG Trade study of March 2016 was based on 2014 data (although the GTAP sources were based on 2011 data). This enormous difference between these two studies, to both of which David Laborde of IFPRI has contributed, is not conducive to accredit the evaluations based on such models!

Moreover, imports from the EU28-UK of D1 subgroup of products taxed at 10% or duty free would continue to increase at the same rate as those of liberalized products and would also contribute to the diversion of trade in favour of the EU28-UK. We can deduct the IDs losses from these diverted imports.

Trade diversion will add €988 M to CEMAC imports of liberalized products (in fact 123 plus the excluded products 51) from the EU28-UK in 2016, €1.139 bn in 2022 and €1.332 bn in 2029. So that total imports of 12351 products would rise with trade diversion from €5.927 bn in 2016 to €6.835 bn in 2022 and €7.990 bn in 2029. But the IDs on these imports would fall from €702 M in 2016 to €293 M in 2022, €8 M in 2028 and €17.6 M corresponding to those on excluded products 51, as those on liberalized products would then be zero.

VII - The decline in tax revenues related to VAT on imports

A CEMAC directive of 19 December 2011 calls on the Member States to levy a VAT at a rate between 15% to 19%, with a reduced rate of 5% to 10% for some basic food products, in fact with large imports (meat, wheat and flour, concentrated milk) and on pesticides, fertilizers and non-school books, school books being exempted¹⁴. The VAT is at 19.25% in Cameroon (17.5% in principal plus 1.75% of additional communal centimes, with agricultural exceptions), at 18% in Chad and Gabon (reduced rates on certain agricultural products)¹⁵, at 19% in the Central African Republic (5% for some basic food products such as wheat flour, milk, frozen fish, refined oils) and varies in Congo from 20% to 25% depending on the ID rate on imports. For conservative reasons an average rate of 18% will be adopted¹⁶. Since the VAT levied on imports is based on the CIF value plus the ID, for a CIF value of imports plus DD of €6.629 bn on liberalized products (including 51 of the excluded products taxed at 10% or DD zero), with the APE in 2016 the VAT collected would have been €1.193 bn and would increase to €1.283 bn in 2022 and €1.442 bn in 2029. However, adding the VAT on products excluded from subcategories 52 and 53 total VAT with the EPA will increase from €1.461 bn in 2016 to €1.552 bn in 2022 and €1.712 bn in 2029.

Tables 12 and 13 show the different steps involved in calculating the losses of customs revenues (IDs + VAT) on liberalized and excluded products with and without the EPA and Table 14 shows the annual and cumulative losses from 2016 to 2050.

Without the EPA the VAT on total imports takes into account the average ID of 15.87% on 1235 which has no reason to decrease, and also the increase of the population but not the trade diversion. It will increase from €1.270 bn in 2016 to €1.428 bn in 2022, €1.626 bn in 2029 and €2.380 bn in 2050.

¹⁴ <http://droit-afrique.com/upload/doc/cemac/CEMAC-Directive-2011-07-TVA.pdf>

¹⁵ <http://www.izf.net/content/taxes-locales-et-tva-tchad>

¹⁶ <https://www.imf.org/external/np/seminars/eng/2011/revenue/pdf/ngakosso.pdf>

By adding IDs, customs revenues on imports (IDs + VAT) are higher with the EPA from 2016 to 2018 than without the EPA because the trade diversion increases imports and receipts of IDs and VAT but, as the IDs fall with the EPA, annual losses appear in 2019 and cumulative losses appear in 2022 at €257 M and then jump at €4.432 bn in 2029 and €26.350 bn in 2050.

VIII – Losses of IDs + VAT on imports from intra-CEMAC and the Rest of the World

We have seen that, according to ITC TradeMap, CEMAC's total imports would have been of €15.264 bn in 2015, of which €5.571 bn from the EU28 (of which €368 M from the UK, implying €5.203 bn from the EU28-UK), €345 M intra-CEMAC and €9.348 bn from the rest of the world (RoW). Or, in percentage of the total: 34.09% from the EU28-UK, 2.26% from intra-CEMAC and 63.65% from the RoW (of which 2.41% from the UK, i.e. 61.24% from the EU28-UK). But ITC TradeMap amounts are corrected on the basis of tables 13 and 14 on Eurostat's data on EU28-UK exports: if CEMAC's total CIF imports from the EU28-UK amounted to €5.966 bn taking into account population growth and trade diversion were 34.09% of total imports, these total imports were of €17.501 bn, those intra-CEMAC of €396 M and those from the RoW of €11.139 bn, of which €422 M from the UK. Lacking data per tariff line on imports from the RoW and intra-CEMAC, the same distribution as that of total imports from the EU28-UK in 2015 is used between liberalized products (77.99%) and excluded products: 51 (2.79%), 52 (0.70%) and 53 (18.53%), i.e. €8.688 bn, €311 M, €8 M and €3.206 bn respectively.

However, if CEMAC caps imports of subcategory 53 taxed at 30% from the RoW to their 2015 level, its total imports increase to €14.563 bn and the share coming from the EU28-UK increases to 40.97%. But there is no reason to limit intra-CEMAC imports since products circulate without ID (in theory!). Trade diversion is divided between imports from RoW and CEMAC in proportion of their shares in total EU28-UK imports, i.e. 96.57% and 3.43%.

Tables 15 and 16 present the successive calculations to impute trade diversion of 12351 products recorded in Tables 12 and 13 to CEMAC imports from the RoW and intra-CEMAC. The IDs and VAT relating to these imports, diverted from the RdM and CEMAC, are then calculated, knowing that there is no DD on internal trade within CEMAC and that only 50% of the VAT is retained as proposed by Lionel Fontagné. This resulted in losses of IDs + VAT falling from €308 M in 2016 to €257 M in 2022 and €207 M in 2029 to rise to €288 M in 2050. Incidentally, although the data for 2050 were shown, we did not always comment them since the liberalization process would end in 2029.

Table 17 summarizes the annual losses of IDs + VAT on imports from the EU28-UK (1st line) and those from the RoW and intra-CEMAC linked to the trade diversion (2nd line) and presents the cumulative losses from 2016 to 2050. Annual losses rise from €41.5 M in 2016 to €586 M in 2022, €1.027 bn in 2029 and €1.689 bn in 2050. Cumulative losses jump to €2.222 bn in 2022, €8.120 bn in 2029 and €36.404 bn in 2050.

IX - The impact of imports from intra-CEMAC and RoW not affected by trade diversion

The bottom of Tables 15 and 16 shows that the annual CEMAC customs revenue losses due to trade diversion in favour of the EU28-UK do not affect those perceived on the remaining imports from the RoW and intra-CEMAC. These revenues remain very large, since the trade diversion concerns only 5.5% of the total CEMAC imports, i.e. 20% of the 12351 imports from the EU28-UK, which in 2015 represent only 80% of the 34.09% of total CEMAC imports. However, if the percentage of total customs revenue losses on imports due to the EPA is only 1.45% of net revenues in 2016, it will rise to 22% in 2022, 32.5% in 2029 and 36.8% in 2050. This underlines the growing weight of net customs losses due to the EPA in spite of the large imports other than from the EU28-UK that will remain.

Conclusion

The present study focused on CEMAC's customs revenue losses in the event of the finalization and implementation of the regional EPA. These losses would be very heavy, rising from €41.5 M in 2016 to €586 M in 2022, €1.027 bn in 2029 and €1.689 bn in 2050, and cumulative losses would jump to €2.222 bn in 2022, €8.120 bn in 2029 and €36.404 bn in 2050. In the current slump of commodities prices, starting with oil which accounts for the

bulk of CEMAC exports and fiscal revenues, industrialization should be the first objective, which demands an enhanced regional integration. The implementation of the EPA by Cameroon alone poses a serious threat to the other CEMAC Member States, due to the laxity of the rules of origin within CEMAC, as they would be invaded by EU products imported duty free by Cameroon. But the EPA would also greatly restrict political leeway for regional integration and long-term sustainable development. Critical analyses of the West African EPA are largely valid for Central Africa¹⁷.
